## Level 5 Capstone

Object: To create a To Do App which allows users to pull prepopulated data from an API for frequently used tasks. The user will be able to create, edit, and delete tasks as well as provide a title, description, image URL. The user will be able to save tasks as frequently used.

### Layout

#### Navbar

- Button: Home Page
- Button: that leads to frequently used tasks (page?) that can be saved to a new list.
- Title “To Do”

#### Body

- Basic Blank Form for input data types: Title, Description, Image URL situated at top of Body
- Each Card will have the inputs plus buttons for editing, updating, and deleting.
- In edit mode, the buttons will allow the user to save their changes or cancel them.
- If a card is favorited, then the user will be able to delete from the current list but not the favorited list.
- Each card will be saved and displayed on the body.
- The user will be able to favorite a card and it will be on the Frequently used tasks page.

Goal: Breakdown tasks in a way that makes them easier to complete and access frequently used tasks for quicker task list creation.
